UNISEX SALON & WELLNESS

Onboarding & Subscription

Salon Register → KYC → Free Usage → Plans, Discounts & GST

Version 1.1 | **Date** July 14, 2026 | **Confidential**

© 2026 GlowTap

1. Overview

Salon owners (Salon Admins) join GlowTap either from the marketing landing page or via an advertisement deep-link into the registration form. They submit **organization** details, **primary branch** details, KYC documents, and images. Super Admin reviews and approves (optionally granting free usage). After that, the admin either uses the free period or must select a subscription and pay (with plan × cycle discounts and GST) before continued full access.

```
Landing / Ad → Register form
  → Org + Primary branch + KYC docs + images
  → PENDING review
  → Super Admin Approve / Reject
       ├─ Free usage enabled → renewal postponed; use until renewal + grace
       └─ No free usage → 1st login forces subscription + payment
  → Subscription picker (best-value ranked) + discounts + GST
  → Active paid org
```

2. Entry points

Source	Behaviour
Landing page → **Register**	Opens full registration form
Advertisement / campaign link	Deep-links **directly** to the same form (UTM stored in `campaign_attribution`)

Both paths use the same form and same submission rules.

3. Registration form — data captured

3.1 Organization

Mapped to `organizations` (and later `org_bill_structure` at approval / purchase).

Form area	DB fields (primary)
Brand / legal	`name`, `slug`, `legal_name`
Owner contact	`owner_name`, `owner_email`, `owner_phone`
Tax identity	`gst_number`, `pan_number`, `gst_registration_type`, `business_type`, `cin`, `udyam_msme_number`
Address	`registered_address` (JSONB: city, pincode, country, …), `state_id` → `states`
Campaign	`campaign_attribution` (JSONB UTM / ad params from landing or ad link)
Documents / media	`kyc_document_url`, `gst_certificate_url`, `photo_url`, `logo_url`
Status at submit	`status = PENDING`, `kyc_status = PENDING`

Display state name via join `states`. **Billing GST state** may also be set on `org_bill_structure.state_id` (often copied from org `state_id` at approval).

3.2 Primary branch

Mapped to `branches` with `is_primary = TRUE`.

Form area	DB fields (primary)
Identity	`name`, `slug`, `organization_id`
Location	`address` (JSONB), `state_id` → `states`, lat/long
Contact / ops	`contact_phone`, `contact_email`, `operating_hours`
GST at outlet	`branch_gst_number` (if separate)
Licenses	`shop_establishment_license_number` / `_url`, `trade_license_number` / `_url`
Docs / media	`kyc_document_url`, `gst_certificate_url`, `photo_url`
Status at submit	`status = PENDING`, `kyc_status = PENDING`, `is_primary = TRUE`

3.3 Documents checklist (aligned with DB)

Document	Typical field
Owner / business KYC ID	`organizations.kyc_document_url`
GST certificate (org)	`organizations.gst_certificate_url`
Org photo / cover	`organizations.photo_url`
Logo	`organizations.logo_url`
Branch storefront photo	`branches.photo_url`
Branch KYC / shop papers	`branches.kyc_document_url`
Branch GST certificate	`branches.gst_certificate_url`
Shop & Establishment (number + PDF)	`shop_establishment_license_number` , `shop_establishment_license_url`
Trade license (number + PDF)	`trade_license_number` , `trade_license_url`

Files are stored in **S3**; DB holds URLs only.

3.4 Salon Admin account

On submit (or on approve — product choice):

- Create / invite Salon Admin login (email = `owner_email` or dedicated auth user).
- Link auth user to `organization_id` .
- Credentials / magic link delivered after successful registration or after approval (confirm in implementation).

---

4. Post-submit states

Entity	After submit
Organization	`PENDING`
Primary branch	`PENDING` , `is_primary = TRUE`
KYC (org & branch)	`PENDING`
Platform access	Restricted / wait screen (“Under review”) — no full Salon Admin

Reject path (required): Super Admin rejects with reason → notify owner → allow resubmit / edit docs → status back to `PENDING` .

5. Super Admin approval

5.1 Review

Super Admin verifies:

- Org identity (PAN, GST, MSME, CIN as applicable)
- Primary branch licenses and photos
- KYC documents and consistency with addresses / state

Actions:

Action	Effect
Approve KYC	`kyc_status = VERIFIED`, audit `kyc_verified_at` / `kyc_verified_by`
Approve org / branch	`status = ACTIVE` (or org ACTIVE with billing gate — see below)
Reject	`REJECTED` / KYC `REJECTED` + reason

5.2 Optional free usage

At approval, Super Admin may **enable free usage** (e.g. 1 free month).

Field	Update
`org_bill_structure.free_usage_days`	Add days granted (e.g. `+= 30` or `+= months × 30`)
`org_bill_structure.start_date`	Approval / onboarding date
`org_bill_structure.renewal_date`	Postponed by free period
`org_bill_structure.status`	`ACTIVE` (trial)

Rule (recommended): Free period is counted in **days** via `free_usage_days` (default grant = 30 for "one free month"). Product may later support N months → `free_usage_days += N * 30`.

```
renewal_date = start_date + free_usage_days
```

Until `renewal_date`, Salon Admin can use the platform **without** selecting a paid subscription (if free was granted).

5.3 No free usage

- Create `org_bill_structure` shell or leave incomplete until payment.
- On **first Salon Admin login**, force **subscription selection + payment** before full access (billing gate).

6. Renewal, grace, and restriction

```
… usage …
    → renewal_date
    → grace_period_days (default 7)
    → if not renewed / unpaid → restrict platform
```

Period	Access
Before `renewal_date`	Full (if ACTIVE / paid or in free period)
Between `renewal_date` and `renewal_date + grace_period_days`	Still allowed; show paywall / reminders
After grace ends without payment	Restricted (`org_bill_structure.status = SUSPENDED` or org gated)

Restriction behaviour (product default):

- Block new bookings / POS / admin mutating actions
- Optional read-only history
- Clear CTA: renew subscription

`auto_renew` on `org_bill_structure` drives reminder / NACH retry flows (payment objects in a later doc).

7. Subscription purchase (first paid or renew)

7.1 Catalog

- Plans: `subscription_plans` (`name` , `max_branches` , **`amount`** list price)
- Cycles: `billing_cycles` (`MONTHLY` , `QUARTERLY` , `HALF_YEARLY` , `YEARLY` , `interval_months`)

7.2 Discount configuration

Table: `billing_discount_configs`

Rule	Detail
Unique	`(subscription_plan_id, billing_cycle_id)` unique (`NULLS NOT DISTINCT`)
Types	`PERCENTAGE` or `FIXED_AMOUNT`
Scope	Specific plan and/or cycle; `NULL` plan = all plans for that cycle
Stack	Only if **both** matching rows have `is_stackable = TRUE`
Priority	Used when overlapping matches (e.g. Growth+Yearly vs all-plans+Yearly); lower number wins

7.3 UI: showcase benefits & best suggestion

1. Build all **plan × cycle** options (active plans × active cycles).
2. For each option, resolve discount(s) from `billing_discount_configs` .
3. Compute:

```
list_price     = subscription_plans.amount   (or multiplied by cycle policy if list is monthly — confirm cata
discount_amt   = from PERCENTAGE and/or FIXED_AMOUNT
net_before_tax = list_price - discount_amt
effective_monthly = net_before_tax / billing_cycles.interval_months
```

4. Sort by **lowest** `effective_monthly` (best value) → show **Best value** badge on top.
5. On selection, show explicit copy, e.g.:

> Based on **Growth + Yearly**, you get **₹500 off** (Growth Yearly offer).
> List ₹2,499 → after discount ₹1,999.

Always explain **which** discount config(s) applied.

7.4 GST on platform fee (GlowTap → salon)

This is GST on the **SaaS / platform subscription**, not on salon beauty services to end customers.

Input	Source
Taxable value	`net_before_tax` (after discounts)
Billing state	`org_bill_structure.state_id` → `states`
Rates	`state_tax_configs` for that `state_id`

```
if GlowTap GST state == org billing state:
  apply CGST + SGST components
else:
  apply IGST component
invoice_total = taxable + GST
```

Checkout must show line-level GST (CGST/SGST or IGST).

Persist after successful payment on `org_bill_structure`:

- `subscription_plan_id`, `billing_cycle_id`, `state_id`
- `platform_fee_amount` = net before tax (or gross — pick one convention and stick to it)
- `start_date` / `renewal_date` (next period from cycle `interval_months`)
- `payment_method`, `last_payment_at`, `payment_reference`
- `status = ACTIVE`
- `commission_pct` (default or Super Admin override at approve)

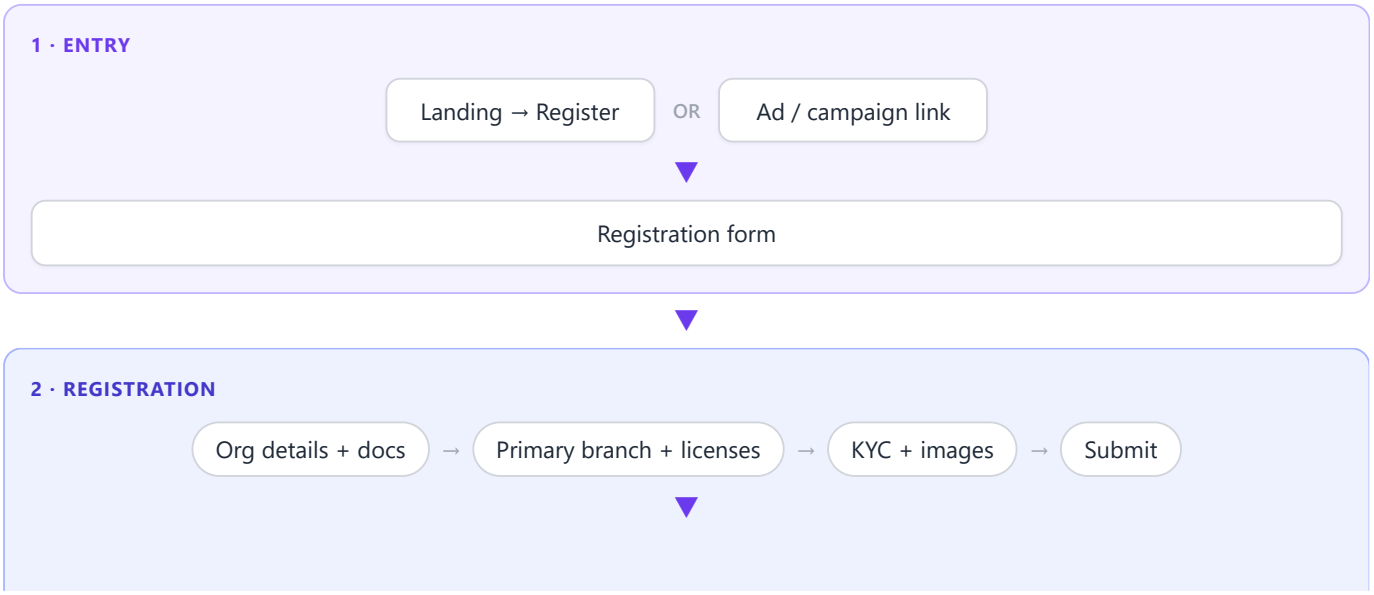

7.5 Example checkout summary

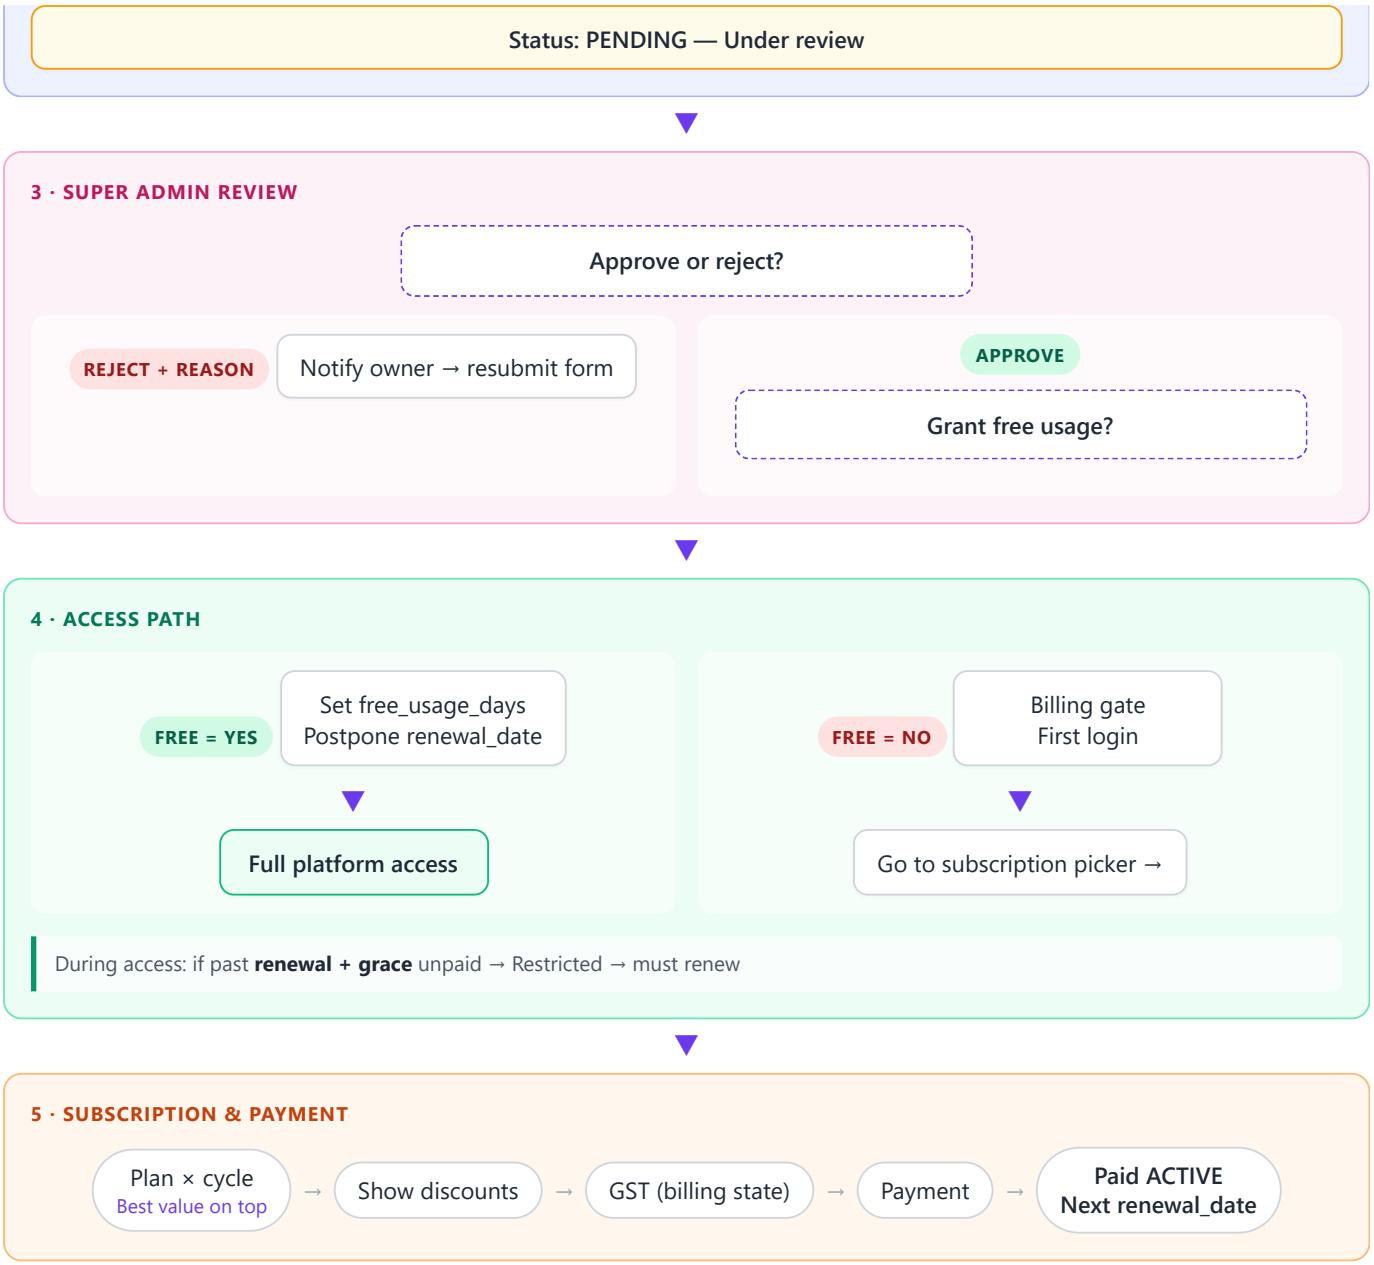

```
Plan: Growth | Billing: Yearly
List price:           ₹2,499.00
Discount (₹500 off): -₹500.00
Taxable:              ₹1,999.00
CGST 9%:              ₹179.91
SGST 9%:              ₹179.91
Payable:              ₹2,358.82
```

(Inter-state: single IGST line instead of CGST+SGST.)

---

8. End-to-end flow

Flow summary (phases)

Phase	What happens
1 · Entry	Landing Register **or** ad deep-link → same form
2 · Registration	Org + primary branch + KYC → `PENDING`
3 · Review	Super Admin approve (optional free days) or reject → resubmit
4 · Access	Free trial access **or** billing gate on first login
5 · Billing	Pick plan/cycle → discounts → GST → pay → renew / grace / lock

9. Roles

Role	Responsibility
Prospect / Salon Admin	Submit onboarding form; pick plan; pay
Super Admin	KYC review; approve/reject; grant free usage; set commission
System	Apply discounts, GST, renewals, grace lock

10. Open / future items

Item	Notes
Salon Admin auth schema	User ↔ org mapping
Payment / invoice tables	Gateway refs, GST invoice number, PDF URL
GlowTap GSTIN home state	Required for CGST+SGST vs IGST
Email / SMS templates	Submitted, rejected, approved, renewal, grace

11. Schema references

Concern	Tables
Org / branch / KYC docs	`organizations`, `branches`
Billing terms	`org_bill_structure` (`free_usage_days`, `grace_period_days`, `renewal_date`, `state_id`, …)
Plans & price	`subscription_plans.amount`
Cycles	`billing_cycles`
Discounts	`billing_discount_configs`
States & tax	`states`, `state_tax_configs`

Full column detail: **Organization Structure** solution doc under `SchemaMaking/superAdmin/Solution docs/`.
