Salon Admin Portal — Business & Operations

Version 1.2 | **Date** July 4, 2026 | **Confidential**

© 2026 GlowTap

1. Executive Summary

The **GlowTap Salon Admin Portal** is the operational hub for onboarded salons. It enables the **Main Admin (Salon Admin)** — the primary owner account created at salon approval — to manage the organization profile, subscription, billing, branches, sub-admins, staff, services, appointments, and reports across one or more physical locations.

GlowTap follows an **Organization → Branch** model. The Main Admin sees all branches under the org on a central dashboard and selects a **active branch context** to perform branch-specific actions. **Sub Admins** are created by the Main Admin with access limited to assigned branches and permitted modules only.

End-user bookings and payments flow through the GlowTap consumer app; the Admin portal manages fulfillment, staff scheduling, service catalog, attendance, and salon-side financial visibility.

2. User Roles & Access

Role	Description	Branch Access	Typical Permissions
Main Admin (Salon Admin)	Primary org owner; auto-created on Super Admin salon approval	All branches under the org	Full access: profile, subscription, billing, sub-admins, all branch operations, org-level reports
Sub Admin	Delegated staff manager created by Main Admin	Assigned branches only	Module-scoped: e.g., employees, services, appointments, attendance, branch reports — as granted by Main Admin

Access principles:

- Main Admin can create, edit, and disable Sub Admins and assign **branch list** + **module permissions** per Sub Admin
- Sub Admin cannot upgrade/downgrade subscription, manage org profile billing, create other Sub Admins, or access branches outside their assignment
- Super Admin can **disable** any admin account (fraud/policy); disabled users cannot log in
- When org is **Suspended** or **Terminated** by Super Admin, the Admin portal is locked (read-only or full lock per platform policy)

> Login is secured with email/password. Session timeout follows platform configuration.

2.1 Sub Admin Module Permissions

When creating or editing a Sub Admin, Main Admin toggles access per module:

Module	Scope
Branch Profile	View/edit branch details for assigned branches
Employees	Onboard, edit, deactivate staff
Leave & Holidays	Weekly offs, leave application, branch holidays
Attendance	Mark and view in/out
Services	Create, edit, deactivate services and specialist tags
Appointments	View, confirm, reschedule, cancel; initiate refunds; booking history
Transactions	View branch B2C payment history
Reports	Branch-level reports for assigned branches
CMS & Banners	Create and pay for customer-app advertisement campaigns (Main Admin or delegated)

Main Admin always retains full access regardless of toggles.

3. Platform Navigation Overview

```
Dashboard (org-wide; branch selector)
├── Organization Profile        (Main Admin only — subscription, billing, org details)
├── Branches                    (list, profile, request new branch)
├── Sub Admins                  (Main Admin only)
├── Employees                   (per branch context)
├── Leave & Holidays            (per branch context)
├── Attendance                  (per branch context)
├── Services                    (per branch context)
├── Appointments & Bookings     (per branch context; org-wide booking history)
├── Transactions                (org or branch context)
├── Reports                     (org-level + branch-level)
├── CMS & Banners               (customer-app advertisement campaigns — org-level)
└── Support & Ticketing         (raise/view tickets to Super Admin)
```

Branch context: Most operational modules require an active branch selection (from dashboard or branch switcher). Org-level modules (Organization Profile, Sub Admins, org-wide Reports, subscription upgrade, **CMS & Banners**) do not require branch context.

4. Module Specifications

4.1 Authentication

- **Login:** Email + password (credentials emailed at salon approval)
- **Logout** and session expiry handling
- **Change password** from profile/settings (logged-in user)
- **Forgot password:** From login screen — enter registered email → system sends reset link → user sets a new password on the reset page (link expires per platform policy)
- **Account disabled** state: clear message when Super Admin or Main Admin has disabled the account

> MFA may be added in a future release; not in scope for v1.0.

4.2 Dashboard (Home)

Main Admin view — org-wide landing:

- **Branch cards / list:** All branches with name, city, status (Active, Pending Approval, Suspended), today's appointment count, today's revenue snapshot
- **Branch selector:** Choose one branch to enter branch context for operational modules; selection persists until changed
- **Org KPIs:** Total appointments (today / week), total revenue (today / week / month), active employees across branches, upcoming renewals
- **Alerts:** Pending branch approval requests, subscription expiry window, failed renewal payment, open support tickets, staff on leave today
- **Quick actions:** Switch branch, view appointments, add employee, create service, create banner campaign, raise support ticket
- **Promotional banners:** Platform-managed in-app banners (plan upgrade offers, renewal reminders, branch limit warnings — configured by Super Admin)

Sub Admin view:

- Dashboard limited to **assigned branches** only
- Same branch selector and KPIs scoped to permitted branches
- No org subscription or Sub Admin quick actions

4.3 Organization Profile & Subscription (Main Admin Only)

Central profile for the salon **organization** (not a single branch).

4.3.1 Organization Details

- Business name, logo, registered address, GST/tax ID, owner name, contact email, phone
- Edit and save org-level profile fields (audit logged)
- View account status: Active, Suspended, Terminated (read-only; set by Super Admin)

4.3.2 Subscription & Entitlements

- **Current plan:** Name, code, start date, renewal/expiry date, billing cycle
- **Entitlements under plan:** Max branches, appointments module, employee limit (if plan-capped), analytics tier, other features per Super Admin **Feature Entitlements Matrix**
- **Usage vs limits:** Branch count vs max branches; feature flags shown as allowed / not allowed
- **Payment method** on file (masked)

4.3.3 Plan Upgrade & Downgrade

Main Admin can initiate plan change from the profile:

1. View available plans (active plans only, as configured by Super Admin)
2. System validates **Plan Change Rules** defined by Super Admin:
    - **Upgrade:** May take effect immediately; billing per Super Admin rule — **prorated charge** or **no proration** (platform configuration)
    - **Downgrade:** Effective immediately or at next renewal per Super Admin rule; **branch count must fit** new plan limit before downgrade completes
    - Promotional / contract discounts display per plan (marketing descriptions from Super Admin)
3. Confirm change; payment collected if applicable
4. Confirmation shown with effective date and invoice reference

> Super Admin may also change plan manually from the Super Admin portal (goodwill, dispute); Admin sees updated state in profile.

4.3.4 Invoices & Billing History

- List of subscription invoices: invoice number, date, type (purchase, renewal, upgrade, credit), amount, status (Paid, Pending, Failed)
- **Download invoice** (PDF) per row
- View applied RC/NRC discounts with description (as configured by Super Admin)
- Failed payment status with retry guidance and link to update payment / raise ticket

---

© 2026 GlowTap

4.4 Branch Profile & Settings

Each branch has its own **Profile** section visible when that branch is in context (Main Admin or Sub Admin with Branch Profile permission).

Branch details:

- Branch name, address, city, pin code, contact phone, email
- Operating hours: **branch start time** and **branch end time** (used for slot generation)
- Branch photos / gallery (optional)
- Status: Active, Pending Approval, Rejected, Suspended
- GPS/map pin (optional, for consumer app discovery)

Actions:

- Edit branch details (Main Admin; Sub Admin if permitted)
- Submit **Save** — changes reflected immediately for booking and slot logic

> Primary branch is created at salon approval. Additional branches require a **Branch Request** (see §4.5).

4.5 Branch Management

4.5.1 Branch List

- All org branches: name, city, status, employee count, services count
- Navigate to branch profile or switch branch context

4.5.2 Request New Branch (Main Admin)

Workflow (aligned with Super Admin §4.3):

1. Main Admin clicks **Add Branch**
2. System checks: current branch count vs subscription **max branches**
    - If **at limit** → prompt to upgrade plan before submission
    - If **within limit** → allow form
3. Submit: branch name, address, contact, proposed operating hours
4. Status **Pending Approval** until Super Admin approves or rejects
5. Notification on approve/reject (email + in-app)
6. On approval, branch appears in dashboard and branch list as **Active**

Main Admin can view pending requests and rejection reason (if rejected).

4.6 Sub Admin Management (Main Admin Only)

List view:

- Name, email, phone, status (Active, Disabled), assigned branches, last login

Create / Edit Sub Admin:

- Name, email, phone
- **Branch access:** Multi-select from org branches
- **Module permissions:** Toggle per §2.1
- Send credentials email on create (or invite flow)

Actions:

- **Disable** — blocks login; does not delete historical audit data
- **Enable** — restore access
- **Reset password** — triggers email to Sub Admin

> Super Admin can disable a Sub Admin for platform policy violations; Main Admin sees disabled state but cannot override Super Admin disable.

4.7 Employee Management

Available per **branch context** (Main Admin or Sub Admin with Employees permission).

4.7.1 Employee Onboarding

- Add employee: name, phone, email, role/designation, date of joining, profile photo (optional)
- **Employee number:** Auto-generated by system (unique per org or per branch — configurable; sequential format e.g. `EMP-00042`)
- Status: Active, Inactive

4.7.2 Employee List & Detail

- Search/filter by name, employee number, status
- Detail view: profile, assigned services (as specialist), weekly off, leave balance summary, attendance summary

4.7.3 Weekly Off

- Define **weekly off day(s)** per employee (e.g., Monday, Sunday)

- **Edit weekly off:** Change applies from **immediate next calendar day** (not retroactive for today)
- Weekly off blocks specialist availability for slot generation

4.7.4 Deactivate Employee

- Mark inactive; remove from future slot assignment; retain history

---

4.8 Leave & Holiday Management

4.8.1 Employee Leave

Leave types:

- Sick Leave
- Casual Leave
- Paid Leave

Apply leave (Admin / Sub Admin):

- Select employee, leave type, date range, optional note
- Leave blocks specialist availability for affected dates

Manage leave:

- **Edit** pending or future leave
- **Cancel** leave
- **Override** — force approve/deny or adjust dates (with audit note)

Leave on a weekly off day or branch holiday: system warns; admin can proceed if needed.

4.8.2 Branch Holidays

- Define **branch-wide holidays** for the full year (date, name, optional recurring annual flag)
- All employees follow branch holidays — no specialist availability on these dates
- Add, edit, remove future holidays; past holidays read-only

4.9 Attendance

Per branch context.

- **Mark In / Mark Out** for staff on a given date (manual entry by Admin / Sub Admin)
- **Attendance list:** Employee, date, in time, out time, status (Present, Absent, Half-day, On Leave)
- **Edit** attendance records for current and past dates (with audit log)

- Attendance integrates with leave: employee on approved leave shows **On Leave**; weekly off shows **Weekly Off**

> Optional future enhancement: biometric or geo check-in from staff app — not in v1.0 functional scope.

4.10 Service Catalog

Per branch context.

4.10.1 Create / Edit Service

Field	Description
Service name	Display name on consumer app and admin
Description	Rich text or plain description
Price	Base price for the service
Duration	Service length — drives slot consumption (must align with slot configuration)
Photo	Image shown for this service under the branch
Offline payment allowed	Yes/No — if Yes, end user can pay at salon; if No, online payment required at booking
Status	Active, Inactive
Tagged specialists	One or more employees who can perform this service

- Admin / Sub Admin can **edit or deactivate** services at any time
- Deactivated services hidden from new bookings; existing appointments retain service snapshot

4.10.2 Service List

- Filter by status, category (if categories added later), specialist
- Sort by name, price, popularity

4.11 Time Slots & Availability

Per branch context; configured alongside services.

4.11.1 Slot Duration Configuration

- Admin defines allowed **slot granularities** for the branch (e.g., 30 minutes, 45 minutes, 1 hour)

© 2026 GlowTap

- Service duration must be a multiple of or map to configured slot sizes

4.11.2 Auto-Generated Availability

System generates bookable slots based on:

1. Branch **operating hours** (start/end from branch profile)
2. **Service duration** selected
3. **Specialist availability:** employee weekly off, approved leave, branch holidays, attendance (optional: absent staff excluded)
4. Existing **confirmed appointments** blocking time

Display rules (consumer app + admin preview):

- Available slot → bookable
- No qualified specialist for that window → show **No Specialist Available** (not bookable)
- Partial staff availability → only specialists free at that time are offered

Admin can **preview availability calendar** for a service + date to verify configuration.

4.12 Appointments & Bookings

End-user bookings are created in the **GlowTap consumer app**. The Admin portal is the operational console for viewing, acting on, and reporting on those bookings across the organization.

4.12.0 Booking Flow (Admin Perspective)

```
End user books in consumer app
        ↓
Booking appears in Admin → Appointments (branch context)
        ↓
Admin performs allowed action (Confirm / Reschedule / Cancel / Complete / No-Show)
        ↓
Status change logged in booking history; notifications sent per platform rules
        ↓
If cancelled + paid online → optional refund initiation
        ↓
Slot freed or marked complete; transaction and reports updated
```

Booking lifecycle statuses: Booked → Confirmed → In Progress → Completed
Terminal statuses: Cancelled, No-Show

Each transition is subject to **Booking Action Rules** (§5.4) and Sub Admin module permissions.

4.12.1 Appointment List, Calendar & Filters

Scope:

- **Branch context:** Appointments for the selected branch (default operational view)
- **Org-wide (Main Admin):** All branches in one list with branch column and multi-branch filter

Views: List and calendar (day / week / month)

Filters:

- Date range (today, upcoming, custom)
- **Branch** (org-wide view; multi-select for Main Admin)
- Status: Booked, Confirmed, In Progress, Completed, Cancelled, No-Show
- Service, specialist, payment status (Paid, Pending, Failed, Refunded)
- Payment method: Online / Offline
- Source: Consumer app (default; future: walk-in if enabled)

Sort: Date/time, created date, amount, status

Displayed fields:

- Appointment / booking ID, date/time, branch name (org-wide view)
- End user name & contact (phone masked per privacy policy)
- Service, specialist, amount, payment method, payment status
- Current status and time since last update

Dashboard widgets (linked): Today's bookings, pending confirmations, upcoming in next 24h, no-shows this week — scoped to branch or org per role.

4.12.2 Appointment / Booking Detail

- Full booking snapshot: service, duration, specialist, branch, end-user profile link
- End-user note and special requests
- Payment breakdown: gross, GlowTap commission line (transparency), net to salon
- Linked B2C transaction ID(s)
- **Status change history:** who changed status, when, prior → new status, optional reason
- **Reschedule history:** prior date/time slots if rescheduled
- **Refund history:** amount, status, gateway reference (if applicable)
- Quick actions bar (actions allowed for current status only)

4.12.3 Admin Booking Actions

Actions available depend on **current booking status**, **payment state**, and **Admin vs Sub Admin permissions**.

Action	When Available	Description
Confirm	Status = Booked (if confirmation step enabled)	Acknowledge booking; notify end user
Reschedule	Booked or Confirmed; not Completed/Cancelled	Pick new slot from available calendar; prior slot freed; end user notified
Cancel	Booked, Confirmed, or In Progress (policy-bound)	Cancel on behalf of customer; reason required from master list
Mark In Progress	Confirmed; appointment start window reached	Service started
Mark Completed	In Progress or Confirmed (same-day policy)	Service delivered; enables post-service flows
Mark No-Show	Confirmed; customer did not arrive within grace window	Terminal status; slot closed; no-show policy applied
Initiate Refund	Cancelled + online paid; refund not yet completed	Full refund per appointment amount unless partial policy applies

Rules enforced by system (not overridable by Admin):

- Cannot reschedule to a slot with no specialist availability
- Cannot confirm a booking on a branch holiday or when specialist is on leave (slot should not have been bookable)
- Cannot reactivate Cancelled or No-Show bookings — end user must create a **new booking**
- Completed bookings cannot be cancelled (support ticket required for disputes)

4.12.4 Cancel & Refund

When Admin cancels a booking:

- If **paid online** → Admin can **initiate refund** (full refund per appointment amount; partial refund policy per Super Admin / gateway rules)
- Refund status: Initiated, Processing, Completed, Failed
- If **offline payment** → no gateway refund; mark cancelled only
- Cancelled slot freed for rebooking
- Commission reversal to GlowTap handled per platform rules (Super Admin §5.7)

4.12.5 Booking History & Audit

Dedicated **Booking History** view (org-level for Main Admin; branch-scoped for Sub Admin):

- All past and current bookings with full filter set (§4.12.1)
- **Filter by salon org** implicit; **filter by branch** explicit (single or multi-branch)

- Export CSV/Excel for date range and branch selection
- Columns include: booking ID, branch, created date, appointment date, status trail summary, amount, refund flag
- Drill-down opens booking detail with full audit timeline

Audit trail (per booking): immutable log of status changes, reschedule events, refund events, and acting admin user.

4.12.6 Booking-Related Reports & Links

Cross-links from Appointments module to Reports (§4.14):

- Appointment Summary, Peak Hours, Specialist Utilization, Service Performance, Refund Report
- Transaction list filtered by appointment reference from booking detail

> Walk-in booking creation by Admin may be added in a future release.

4.13 Transactions (B2C)

Visibility into **end-user payments to the salon** (aligned with Super Admin §4.5 — salon-facing view).

Org-level (Main Admin): All branches
Branch-level: Selected branch only
Sub Admin: Assigned branches with Transactions permission

List fields:

- Transaction ID, date/time, appointment/booking reference
- End user (name / masked ID)
- Branch, service description
- Gross amount, payment method, status (Success, Failed, Refunded, Disputed)
- Net to salon (after GlowTap commission — commission line item visible for transparency)

Filters: Date range, branch, status, payment method, service, specialist

Actions:

- View detail
- Export CSV/Excel
- Link to related appointment

> Subscription payments (salon → GlowTap) appear under Organization Profile → Invoices, not in B2C Transactions.

4.14 Reports

4.14.1 Organization-Level Reports (Main Admin)

Report	Description	Key Filters
Earnings Summary	Total revenue, net to salon, online vs offline split, refund total	Date range, all branches or selected branches
Earnings by Branch	Comparative revenue per branch	Date range
Earnings by Service	Revenue and booking count per service	Date range, branch
Earnings by Specialist	Revenue and appointment count per employee	Date range, branch
Appointment Summary	Bookings, completions, cancellations, no-shows, conversion	Date range, branch, status
Payment Method Mix	Online vs offline volume and amount	Date range, branch
Refund Report	Refunds initiated, amounts, reasons	Date range, branch
Subscription & Utilization	Plan limits vs branch count, feature usage snapshot	Current period

All org reports support **date range**, **branch multi-select**, and **CSV/Excel export**.

4.14.2 Branch-Level Reports (Main Admin & Sub Admin)

Available for branch context (Sub Admin: assigned branches only).

Report	Description	Key Filters
Branch Daily Summary	Appointments, revenue, attendance headcount for the day	Date
Branch Earnings	Revenue breakdown for the branch	Date range
Service Performance	Top services by bookings and revenue	Date range
Specialist Utilization	Appointments per specialist, idle vs booked hours	Date range
Leave & Attendance	Leave taken by type, attendance rate	Date range, employee
Booking History Export	Full booking audit export	Date range, branch multi-select, status
Peak Hours & No-Shows	Booking density and no-show rate	Date range, branch

Export: CSV/Excel on all reports.

> Advanced analytics tier features may be gated by subscription plan (Super Admin entitlements).

4.15 Support & Ticketing

Salon admins can raise issues to the GlowTap operations team (Super Admin §4.12).

Create ticket:

- Reason & sub-reason (from Super Admin master list)
- Description, attachments
- Link branch / appointment / transaction (optional)
- Priority suggestion (final priority may be set by Super Admin)

Ticket list:

- Status: Created, In Progress, On Hold, Awaiting User Confirmation, Resolved
- View history and Super Admin replies (internal notes not visible)

Actions:

- Add comment / attachment
- Confirm resolution when status is Awaiting User Confirmation
- Reopen if issue persists (within policy window)

4.17 CMS & Banners (Customer App Advertising)

Main Admin (and optionally delegated Sub Admin with **CMS & Banners** permission) creates **paid advertisement campaigns** displayed as promotional banners in the **GlowTap end-customer mobile app**.

This is separate from **platform promotional banners** shown inside the Salon Admin portal (configured by Super Admin — §4.9.2).

4.17.1 Campaign List

- All campaigns for the organization: draft, pending payment, scheduled, live, expired, cancelled
- Columns: campaign name, banner preview thumbnail, date range, branches targeted (org-wide or selected branches), amount paid, status
- Filters: status, date range, branch

4.17.2 Create / Edit Banner Campaign

Banner content:

- Campaign name (internal)
- Banner title and subtitle / body copy
- Banner image (upload; dimensions per Super Admin **Configure Admin CMS** spec)
- CTA label and deep link (e.g., book now → branch/service landing in consumer app)
- Target: all org branches or selected branches

Schedule — date selection:

- Admin selects **start date** and **end date** (inclusive) for when the banner may appear in the customer app
- Calendar shows **slot availability per day** (see §4.17.3)
- Unavailable (fully booked) dates are disabled — Admin cannot select them
- System calculates **total campaign cost** before checkout

Pricing display (read-only, from Super Admin config):

- Per-day banner price × number of days in range
- Any applicable taxes per platform settings

4.17.3 Slot Availability (Auto-Calculated)

GlowTap maintains a **global daily banner capacity** for the customer app (configured by Super Admin — max concurrent live banners per calendar day).

For each date in the selected range:

- **Available slots** = `max_banners_per_day - already_booked_slots_on_that_date` (across all salons)

- If slots = 0 (e.g., 4 slots allowed and 4 already paid on 28 July), that date is **blocked** in the date picker
- Partial availability shown when fewer slots remain than requested (Admin may shorten range or pick alternate dates)

Live rotation: when multiple banners are active on the same day, consumer app shows up to **max banners per day** per Super Admin rules (priority: campaign start order or configured rotation — platform default).

4.17.4 Payment & Activation

1. Admin completes banner configuration and date selection
2. Review screen shows content preview, date range, slot confirmation, and **total upfront amount**
3. Admin pays **upfront in full** via configured payment method (same gateway as subscription or dedicated ad billing — platform config)
4. On **successful payment:**
    - Campaign status → **Scheduled** (if start date in future) or **Live** (if start date is today)
    - Slots reserved for each day in the range
    - Invoice/receipt available under Organization Profile → Invoices (type: Advertisement)
5. On **payment failure:** campaign remains Draft; slots not reserved

No pay-as-you-go or post-paid — advertisement campaigns require upfront payment before slots are locked.

4.17.5 Campaign Management Actions

Action	Description
Edit draft	Modify content and dates before payment
Cancel draft	Discard unpaid campaign
View live preview	See banner as it appears in consumer app mock
Cancel scheduled	Before start date; refund policy per Super Admin (full/partial/none)
Extend dates	Add days if slots available; additional upfront payment for extra days

4.17.6 Notifications

Event	Recipient	Channel
Campaign payment success	Main Admin	Email + in-app
Campaign goes live	Main Admin	Email + in-app
Campaign expiring in 3 days	Main Admin	Email + in-app
Campaign expired	Main Admin	Email + in-app
Payment failed	Main Admin	Email + in-app

4.16 Notifications & In-App Banners

Event	Recipient	Channel
Salon approved (initial)	Main Admin	Email
Branch approved / rejected	Main Admin	Email + in-app
Subscription renewal reminder	Main Admin	Email + in-app banner
Plan change confirmation	Main Admin	Email + in-app
Invoice / payment failed	Main Admin	Email + in-app
Account suspended / resumed	Main Admin	Email + in-app
Ticket status update	Ticket raiser	Email + in-app
Sub Admin credentials	Sub Admin	Email
Appointment cancelled (by admin)	End user	Email/SMS/push (consumer app)

Platform in-app banners (Super Admin configured): plan upgrade prompts, renewal offers, branch limit warnings — shown on Salon Admin dashboard per targeting rules.

Customer-app advertisement banners (Salon Admin configured): paid campaigns managed in **CMS & Banners** (§4.17); visible to end users in the consumer app only when live and within paid date range.

© 2026 GlowTap

5. Key Business Rules

5.1 Branch Limits & Plan Entitlements

- Maximum branches enforced by current subscription plan (Super Admin §5.1)
- Features (employees cap, analytics tier, appointments module) enforced per **Feature Entitlements Matrix**
- Downgrade blocked if active branch count exceeds new plan limit — Main Admin must deactivate branches or cancel pending requests first

5.2 Plan Change & Billing

- Upgrade/downgrade behavior (proration, effective date) follows **Plan Change Rules** configured by Super Admin — not hardcoded in Admin portal
- Main Admin sees applicable charges/credits before confirming
- Invoice generated for chargeable plan changes; available in Organization Profile

5.3 Specialist Availability & Slots

- Slots generated only within branch operating hours
- Employee weekly off changes apply from **next calendar day**
- Branch holidays and approved leave remove specialist from availability
- If no specialist available for a slot → **No Specialist Available** (consumer-facing)

5.4 Appointments, Bookings & Refunds

- Booking actions limited by current status (§4.12.3); system blocks invalid transitions
- Cancelling online-paid bookings triggers optional refund initiation by Admin
- Refund processing subject to payment gateway and Super Admin commission reversal rules
- Cancelled and No-Show bookings cannot be reactivated; end user must create a new booking
- Booking history and status audit retained for compliance; export available to Main Admin
- Sub Admin booking actions require **Appointments** module permission on assigned branches only

5.5 Advertisement Banner Campaigns

- Campaign dates must fall entirely on **available slot days** (Super Admin Configure Admin CMS §4.10.2)
- Upfront payment required before slots are reserved; unpaid drafts do not consume capacity
- Maximum concurrent customer-app banners per day enforced platform-wide, not per salon
- Refund on cancellation before go-live follows Super Admin **Advertisement Refund Policy**
- Live campaigns cannot exceed paid date range; extension requires additional payment and slot check

5.6 Sub Admin Scope

- Sub Admin access is intersection of **assigned branches** AND **enabled modules**

© 2026 GlowTap

- Main Admin cannot grant access to branches outside the org
- Super Admin disable on Sub Admin overrides Main Admin enable

5.7 Account Suspension

- When Super Admin suspends the org, Admin portal access is restricted; end-user booking to affected branches stops
- Data retained; no deletion of employees, services, or history

6. Glossary

Term	Definition
Org / Organization	Salon business entity on GlowTap; owns subscription and branches
Branch	Physical salon location under an organization
Main Admin / Salon Admin	Primary org administrator; full branch and subscription access
Sub Admin	Delegated user with limited branch and module access
End User	Consumer booking via GlowTap app
Specialist	Employee tagged to perform specific services
RC / NRC	Recurring / Non-Recurring Charge — subscription billing components
B2C Transaction	End-user payment to salon for services/bookings
Slot	Bookable time window derived from branch hours, service duration, and specialist availability
Booking	End-user appointment created via consumer app; managed in Admin Appointments module
Banner Campaign	Paid advertisement slot(s) in the end-customer app for a configured date range
Banner Slot	One unit of daily customer-app banner capacity consumed on a calendar date
