GlowTap Salon Admin — Sub Admin Requirements

Source: Admin-Functional-Spec.md v1.3 (§2, §2.1, §4.2, §4.6, §5.5)
Purpose: Define what a Sub Admin can see and do vs Main Admin.
Date: July 26, 2026

1. Role summary

	Main Admin	Sub Admin
Who	Org owner (created on salon approval)	Delegated user created by Main Admin
Branches	All org branches	**Assigned branches only**
Access model	Full	**Assigned branches ∩ enabled modules** (§5.5)

Hard rules (§2):

- Sub Admin **cannot** manage subscription / billing / org profile
- Sub Admin **cannot** create or manage other Sub Admins
- Sub Admin **cannot** access branches outside assignment
- Super Admin disable on a Sub Admin **overrides** Main Admin enable
- If org is Suspended / Terminated → portal locked for all admins

2. Always available (not module-gated)

Function	Sub Admin
Login / logout / session expiry	Yes
Forgot / reset password	Yes
Change password (logged in)	Yes
Dashboard (scoped)	Yes — assigned branches only
Branch switcher	Yes — assigned branches only
Account disabled message	Yes (if Main or Super Admin disabled them)

3. Never visible to Sub Admin (Main Admin only)

Nav / function	Spec
Organization Profile (details, subscription, invoices, plan change)	§4.3 — Main Admin only
Sub Admins (list / create / edit / disable / reset password)	§4.6 — Main Admin only
Org subscription KPIs / upgrade / renewal billing actions on dashboard	§4.2 Sub Admin view
Org-wide reports (Earnings Summary, by Branch, Subscription & Utilization, etc.)	§4.14.1 — Main Admin
Request **new** branch / branch-limit upgrade flow	Plan/org action — Main Admin
Org-wide appointment / transaction scope across unassigned branches	§5.5

4. Module permissions (§2.1) — what Main Admin can toggle

Access = module **ON** + branch **assigned**. If module OFF → hide nav item (or show locked / no access).

Module toggle	Visible functions (assigned branches only)
Branch Profile	View/edit branch details: name, address, hours, gallery, GPS, status view (§4.4)
Employees	List, detail, add/edit, weekly off, deactivate (§4.7)
Leave & Holidays	Apply/manage leave; branch holidays (§4.8)
Attendance	Mark In/Out; list/edit attendance (§4.9)
Services	Service list/create/edit/deactivate; specialists; slot config & availability preview (§4.10–4.11)
Appointments	List/calendar, detail, confirm/reschedule/cancel/complete/no-show; refund if allowed; booking history **branch-scoped** (§4.12, §5.4)
Transactions	B2C payment list/detail for assigned branches (§4.13)
Reports	**Branch-level** reports only (§4.14.2): Daily Summary, Branch Earnings, Service Performance, Specialist Utilization, Leave & Attendance, Booking History Export, Peak Hours & No-Shows

Main Admin always has full access regardless of these toggles.

5. Navigation (Sub Admin shell)

Show only what is granted:

```
Dashboard                        (always — scoped)
├── Branches / Branch Profile    (if Branch Profile ON)
├── Employees                    (if Employees ON)
├── Leave & Holidays             (if Leave & Holidays ON)
├── Attendance                   (if Attendance ON)
├── Services                     (if Services ON)
├── Appointments & Bookings      (if Appointments ON)
├── Transactions                 (if Transactions ON)
├── Reports                      (if Reports ON — branch reports only)
└── Support & Ticketing          (see §6)
```

Hidden: Organization Profile · Sub Admins

6. Support & Ticketing

§4.15 allows salon admins to raise tickets; §4.16 notifies the **ticket raiser**. Support is **not** listed in §2.1 toggles.

Recommended requirement:

- Sub Admin **can** create/view **their own** tickets (and confirm resolution / reopen per policy)
- No separate module toggle in v1.0 — always available when logged in
  (If product later gates Support, add a §2.1 toggle.)

7. Dashboard requirements (Sub Admin)

Element	Behavior
Branch cards	Assigned branches only (name, city, status, today appts/revenue)
Branch selector	Assigned Active branches only
KPIs	Scoped to assigned branches (not full org)
Alerts	Branch-scoped (leave, tickets, branch ops) — **no** org billing / subscription / Sub Admin management
Quick actions	Appointments, employee, service, ticket — **only** if matching module is ON; **no** plan/subscription actions
Platform banners	May still show Super Admin–configured banners (consume-only)

Reference wireframe: `wireframes_admin/dashboard-subadmin.html`

8. Example permission matrix (for QA / wireframes)

Example Sub Admin: `manager@luxecurls.in` — branches: Bandra West only

Module	Granted
Branch Profile	Yes
Employees	Yes
Leave & Holidays	Yes
Attendance	Yes
Services	Yes
Appointments	Yes
Transactions	No
Reports	Yes

Visible nav: Dashboard, Branch Profile, Employees, Leave & Holidays, Attendance, Services, Appointments, Reports, Support
Hidden: Organization, Sub Admins, Transactions
Blocked: Koramangala data, org invoices, create Sub Admin, change plan

9. Acceptance criteria (checklist)

- [ ] Sub Admin login lands on scoped dashboard (assigned branches only)
- [ ] Nav hides Organization Profile and Sub Admins
- [ ] Nav shows only modules toggled ON for that Sub Admin
- [ ] Branch switcher lists only assigned branches
- [ ] Opening an unassigned branch URL shows access denied / redirect
- [ ] Appointments / Transactions / Reports never show other branches' data
- [ ] Reports index shows branch-level set only (no org-level report cards)
- [ ] Disabled Sub Admin cannot log in; SA-disabled cannot be re-enabled by Main Admin
- [ ] Org Suspended lock applies to Sub Admin the same as Main Admin

10. Wireframe follow-up

HTML wireframes live in **`sub admin wireframe/`** (same shell patterns as Main Admin):

1. Shell nav stripped to granted modules
2. Branch switcher scoped to assigned branches
3. Org-only pages unreachable → `access-denied.html`
4. `dashboard.html` as the home pattern (from §4.2 Sub Admin view)

Open `sub admin wireframe/index.html` to browse screens.

Aligned to Admin-Functional-Spec.md v1.3 only.
