employee.employees	1,00,002	43 MB

Methodology

Client wall time via `perf_hooks` around `pg` queries. One warm-up discarded; stats from 5 rounds (min / avg / p50 / p95 / p99 / max). Covering + partial indexes (`076` / `077`), range predicates, and LATERAL aggregates for platform analytics. Local SLO bands are tighter than Neon (no WAN RTT).
